A8 EP Tunnel Sachseln (OW): Rehabilitation, client support and superstructure management

Committente

Federal Roads Office FEDRO, Zofingen Branch

Progettazione

IUB Engineering Ltd. in consortium

Realizzazione

2013-2018

Project monitoring: 2009-2020

Costo dell'opera

CHF 130 million

Prestazioni

Owner's Engineer (OE) and construction supervision in the phases global maintenance concept to implementation/commissioning.

- OE and external construction supervision for operation and safety systems through all phases
- OE construction during project planning

Descrizione

The 5.2 km long single tube Sachseln Tunnel has been in operation since 1997. It no longer meets current tunnel safety requirements. There are insufficient emergency ecape routes for users and the ventilation system only meets 30 % of the standard requirements. The tunnel will be retrofitted with a safety tunnel with 20 cross-links to the main tunnel. The ventilation system will be completely rebuilt. Exhaust air flaps will be installed as well as longitudinal ventilation (Saccardo-Stations at the portals). The entire operation and safety system in the existing tunnel will be replaced and the tunnel will be structurally repaired.
