

A2P Gotthard Pass Road, Göschenen-Andermatt, EP Schöllenen (UR): Building owner support and superstructure guidance

Bauherr

ASTRA (Federal Roads Office) Zofingen Branch

Projektierung

IUB Engineering AG

Zeitraum

2014-2019

Baukosten

CHF 105 million

Leistungen

Owner's engineering services (detailed project - implementation/commissioning) for the overall restoration of the section between Göschenen and Andermatt (approx. 4 km)

Beschreibung

The Gotthard Pass road has been designated a national road since 2008. With the closure of the Gotthard Road Tunnel (e.g. for the pending rehabilitation of the tunnel) it is potentially the main alternative route for traffic. Therefore, a timely and complete overhaul of the pass is very important. In addition to the actual route and drainage, the measures also include all structures, tunnel, galleries and non-motorised traffic. The historical relevance of the 3rd class national road should also be taken into consideration.

Hauptdaten

- Support to the overall project manager with project management, project coordination and administration, process management, and controlling
- Technical support in coordinating the subprojects for construction, environment and safety & operating systems with specialist ASTRA support
- Cost, schedule and quality management according to ASTRA standards
- Financial planning according to ASTRA guidelines
- Services in procurement, contract management, claim management, invoice control
- Support with public relations work
